

Software Test module

Before handover to our customers, we naturally perform a detailed check on our custom software.

Our customers can also profit from our expertise and structured approach by commissioning a check on existing applications. In addition, we can optimize internal test procedures.

Our services include the analysis of test processes, the optimization of structures, the development of key figures and metrics, the implementation of test procedures and test automation.

Overview of a few test procedures:

- Function tests
- System tests
- Integration tests
- Load tests
- Security tests
